

LOW MAINTENANCE LANDSCAPE inc.

HARDY EVERGREEN BAMBOO

LANDSCAPE USES AND IDEAS:

- BEAUTIFUL EVERGREEN PRIVACY SCREEN
- ULTIMATE WIND PROTECTION
- SPECIMEN / FOCAL POINT PLANT
- NOISE AND TRAFFIC SCREENING
- TROPICAL LUSH APPEARANCE
- UNIQUE & INTERESTING PLANT
- PROVEN PERFORMANCE RECORD
- BIRD AND WILDLIFE SHELTER

GROWTH IN THE LOWER MIDWEST (ZONES 5-7):

- MAXIMUM HEIGHT OF 15 TO 25 FEET MAY BE ACHIEVED IN 10 TO 15 YEARS.
- REALISTIC HEIGHT OF 10-15 FEET SHOULD BE EXPECTED IN KANSAS (ZONES 5-6). WINTER WINDS, EXTREME COLD AND PROLONGED SUMMER DROUGHT LIMIT GROWTH.
- GROVE CAN INCREASE IN HEIGHT ABOUT 3-5 FEET PER YEAR IN IDEAL SITES.
- IF HARSH WINTER OCCURS AND OVERWINTERED GROWTH DIES BACK, NEW GROWTH WILL NOT EXCEED PREVIOUS YEARS HEIGHT. (EVERY 3-5 YEARS)
- RHIZOMES, OR UNDERGROUND ROOTS SPREAD DURING THE SUMMER AFTER SHOOT GROWTH HAS OCCURRED. THE RHIZOMES SEND UP SHOOTS EACH YEAR.
- BAMBOO IS VERY RESISTANT TO DROUGHT AND HEAT AFTER ESTABLISHED.
- BAMBOO IS NOT TROUBLED BY ANY DISEASES, INSECTS, ANIMALS OR PARASITES.
- BAMBOO WILL THRIVE IN FULL SHADE TO FULL SUN IN MOIST TO DRY SOILS.
- NEW SHOOTS WILL EMERGE FROM THE GROUND IN MAY EACH YEAR AND GROW UP TO 25 HIGH DURING THE FOLLOWING 4-5 WEEKS WHEN ESTABLISHED!

ESTABLISHMENT PERIOD:

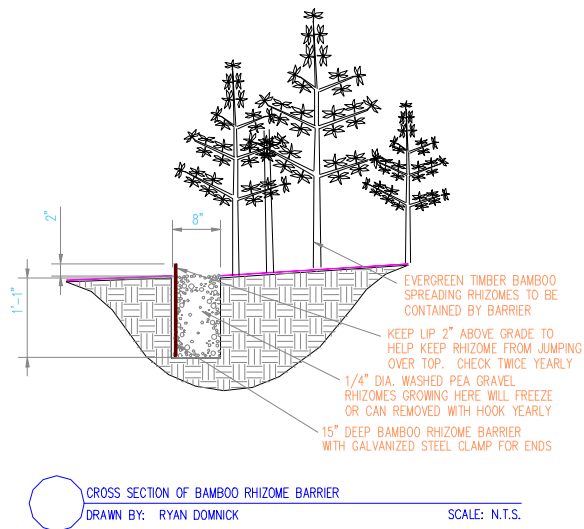

WATER AND FERTILIZE HEAVILY DURING THE FIRST FEW MONTHS, THEN DURING DROUGHTS FOR THE FIRST YEAR. AFTER 1 YEAR, NO WATER OR FERTILIZER IS NEEDED UNLESS YOU WANT EXTREMELY RAPID GROWTH. DON'T PLANT IN CONSTANTLY WET SOILS

- THE MOST RAPID ESTABLISHMENT OCCURS WHEN PLANTED IN JUNE AND JULY WITH IRRIGATION. EARLY SPRING PLANTINGS ARE SUBJECT TO ROOT ROT IF OVERWATERED.
- IF YOU CANNOT WATER, REMOVE THE 75% OF FOLIAGE TO REDUCE ROOT DEHYDRATION.

MAINTENANCE AND SPREAD CONTROL:

- REMOVE DEAD CANES FROM OLDER GROVE EACH SUMMER (JULY)
- SPREAD CAN BE CONTROLLED IN LAWN OR FORESTED AREAS BY MOWING AT LEAST 2-3 TIMES DURING THE MONTHS OF JUNE THROUGH SEPTEMBER.
- TO KEEP BAMBOO FROM SPREADING INTO OTHER LANDSCAPE OR FORMAL LAWN AREAS, YOU MUST INSTALL A CONTINUOUS BORDER AROUND GROVE. 12"-14" DEEP EDGING IS NEEDED FOR LOAMY TO CLAY SOILS; 18-24" DEEP BORDER IS NEEDED FOR SANDY SOILS. AN EFFECTIVE EDGING MATERIAL IS RHIZOME BARRIER.

THIS IS HOW WE CONTROL BAMBOO
WITH BAMBOO RHIZOME BARRIER AND
PEA GRAVEL TRENCH.

THIS BAMBOO IS CONTROLLED BY MOWING
AROUND THE PERIMETER ON THE GROVE ON
A MONTHLY BASIS.

THIS SHOWS HOW YOU CAN USE A BAMBOO SCREEN TO COMPLETELY HIDE THE VIEW OF A
NOSEY NEIGHBORS HOUSE. THIS IS ALSO GREAT FOR BLOCKING TRAFFIC NOISE AND WIND. THIS
GROVE IS CONTAINED WITH AN UNDERGROUND RHIZOME BARRIER AND CHECKED YEARLY.
