

LOW MAINTENANCE LANDSCAPE PLANTS

A photobook of sustainable plants for Kansas Gardens.
Ryan Domnick

INTRODUCTION

Low Maintenance Landscape Plants features creative photographs of sustainable plants and landscapes in Kansas. The challenging climate of Kansas features a mix of everything Mother Nature can dish out. Summers usually bring desert-like heat and drought. Winters usually deliver brutal cold, snow and wind. Spring and autumn can bring erratic temperature swings with too much or too little rainfall.

Photos of the selected plants show that it is possible to grow beautiful gardens and thriving plants in a difficult climate. Plants featured are mostly self-sustainable, and capable of surviving with little maintenance, irrigation and added resources. These plants have had good "staying power" year after year in these Kansas gardens.

Each section of the book is divided into groups designating perennials, shrubs, small trees and specialty plants. Specialty plants, unique enough to be included in their own section, include bamboos, ornamental grasses, hardy tropicals, hardy cacti, yuccas and succulents.

Each plant pictured is identified with both scientific and common names. These pictures also show how to be creative with plants, exploring different angles, vantage points and lighting conditions.

Many plants selected have more than one season of interest. This is a very valuable trait for a plant, to look attractive even when not blooming. All seasons are represented in the photo book.

Winter is the most challenging season to create bright colors in the garden, such as bright green, red, orange or purple. Late summer is also a challenge, because many plants are tired from the typical heat and drought. Some photographs show early spring growth of plants with frost resistant foliage and flowers, at a time before anything else has started to grow. Some plant photographs capture spectacular fall color, persistent foliage and brightly colored berries. These pictures taken during off-peak seasons help illustrate how you can plan a 4-season garden.

CONTENTS

Perennials for Sun Gardens	3-17
Perennials for Shade Gardens	18-25
Shrubs for Sun Gardens	26-33
Shrubs for Shade Gardens	34-37
Ornamental Grasses for Sun Gardens	38-39
Groundcover Bamboo for Shade Gardens	40
Large Bamboo for Sun & Shade Gardens	41
Cold Hardy Tropical Plants	42-43
Cold Hardy Cacti & Succulents	44
Cold Hardy Yuccas & Succulents	45
Small Trees for Sun Gardens	46-47
Small Trees for Shade Gardens	48-49
Index of Genus Names	50
Index of Common Names	51

ABOUT THE AUTHOR

Ryan Domnick is a locally known plantsman and landscape business owner with a degree in Landscape Architecture and Horticulture. Through his business, over a thousand plants have been tested in local Kansas gardens during the last decade. His many years of local and regional garden observation, along with photographic record-keeping, have made these ideas readily available. The author has already done the plant experimentation for you. Domnick says, "For the cost of one or two plants, you can have an entire book of planting ideas that will actually work in Kansas. If you want ideas for plants that won't die, this is the book for you!"
